

Workspace Guard Bnos — Privacy Policy

Effective Oct 8, 2026

Workspace Guard Bnos does not collect, store, sell or share any personal information. This policy explains what the Chrome extension does and what data it handles.

The extension is published by Bnos Yisroel of Baltimore for use on student Chromebooks managed by the school.

What the extension does

Workspace Guard Bnos hides or blocks specific features in Google Workspace and Google Search that the school has chosen to turn off. Examples include AI search and Gemini, web image search in Google Docs, file sharing and emailing, and emojis and GIFs.

The school's administrator chooses these settings in the Google Admin console. Students cannot change them. The extension works entirely inside the student's browser: it hides buttons and menu items on Google pages, and it replaces blocked pages with a notice that says the feature is turned off.

Information we collect

None. The extension does not collect names, email addresses, browsing history, search terms, document contents, location or any other personal information. It does not read or record what students type or view.

The extension keeps a small amount of technical information on the Chromebook itself, using Chrome's built-in extension storage:

- The settings the school's administrator chose in the Google Admin console.
- A list of which blocking rules are currently active.
- If the administrator has set one up, a copy of updated blocking rules and the time they were last downloaded.

This information never leaves the device. It is removed when the extension is uninstalled.

Network connections

The extension does not send any information about students or their activity to Bnos Yisroel of Baltimore, to the extension's developers, or to anyone else. It contains no analytics, tracking or advertising code.

There is one optional connection. If the school's administrator sets a rules address in the Google Admin console, the extension downloads an updated list of blocking rules from that address every 6 hours. This request asks for the file only; it does not include any student information. If no address is set, the extension makes no network requests of its own.

Sharing and sale of data

Because the extension collects no personal information, there is nothing to share, sell, rent or transfer. We do not use any data for advertising, for credit or lending decisions, or for any purpose unrelated to the extension's single purpose of turning off features the school has chosen to block.

The extension's use of information complies with the Chrome Web Store User Data Policy, including the Limited Use requirements.

Children's privacy

The extension is used by students, including children under 13. Because it collects no personal information from anyone, it collects none from children.

Changes to this policy

If the extension ever changes how it handles information, we will update this page and its effective date before the change takes effect.
